Blinkit Analysis

Steps in project

- ✓ Requirement gathering / Buisness requirements
- ✓ Data Walkthrough
- ✓ Data Connection
- ✓ Data cleaning / Quality check
- ✓ Data Modeling – if you are dealing with multiple tables
- ✓ Data processing
- ✓ Dax calculations
- ✓ Dashboard Lay outing
- ✓ Charts development and formatting – charts based on requirements
- ✓ Dashboard / Report developmnet
- ✓ Insights generation

KPI's Requirements : to conduct a comprehensive
Charts Requiremenets is same as granular requirement

DATA WALKTHROUGH :

supermarket means (it is dedicated to blinkit only)
Grocery store means it gives to blinkit and other customers as well .
Item visibilty : suppose you want to buy a soap so what type ,aroma of soaps are mostly liked to be visible .

[we read the over all data that was there in the excel with detailed , it is called **DATA WALKTHROUGH]**

DATA CLEANING :

Check the quality of the data
Changed item type fron lf,rf ---> low fat , regular fat .
In power bi query editor , check the quality of the column (is should say valid 100% , error 0% and empty 0%).

CHARTS REQUIREMENT :

Total sales by fat content : create one donut chart on total sales by fat content , then , go to modelling create filed parameter(new parameter),give the parameter name as metrcis given as avg sale,avg rating,total sale,no of items .
Select the donut chart remove that chart from there and add the metrics , it will show data now according to the metrics
